Vision for Humanity

10 June 2026

To Whom It May Concern,

I am pleased to recommend **Benjamin Xue**, who worked with Vision for Humanity Charitable Trust as a **Full-Stack Engineer** from January to June 2026.

Benjamin's primary responsibilities included developing and maintaining React.js web applications and designing backend data models and API endpoints using Strapi CMS. Throughout his engagement, he consistently delivered high-quality work, demonstrated strong technical ability, and proved to be a reliable and valued member of our team.

As a charitable organisation, we operate without formal in-house training programmes, requiring team members to learn quickly, solve complex problems independently, and collaborate effectively with stakeholders. Benjamin adapted exceptionally well to this environment. Working directly with myself and our Project Architect, he quickly assumed responsibility for significant frontend development work and later became a key backend contributor supporting other React developers.

One of Benjamin's most notable achievements was helping migrate our website from static pages to a hybrid server-side rendering (SSR) architecture using Vike, significantly improving performance and search engine visibility. He also delivered several complex integrations involving Shopify, Firebase, and Strapi, often identifying and resolving issues before they affected the wider team.

Benjamin consistently communicated clearly, maintained strong documentation standards, and demonstrated a high level of ownership and accountability. He combines solid technical capability with initiative, professionalism, and a positive attitude. He made a meaningful contribution to our organisation, and I would gladly work with him again in the future.

I recommend Benjamin without reservation for any React development, frontend engineering, full-stack engineering, or software development role.

Vision for Humanity

Selected Frontend & Full-Stack Engineering Achievements

Core Technologies: React.js, JavaScript, Vike SSR, Strapi CMS, Firebase, Shopify, REST APIs, Frontend Architecture, SEO Optimisation.

- **Frontend Architecture:** Built and maintained React frontends, taking ownership of frontend architecture and reusable component libraries.
- **Performance & SEO:** Migrated static pages to a hybrid SSR solution using Vike, improving page-load performance by approximately 40% and increasing Lighthouse SEO scores from 72 to 91.
- **Feature Development:** Developed user profiles, social connectivity (follow/follower systems), and independent comment sections for videos and quotations.
- **Video Content Platform:** Engineered a content platform featuring YouTube API integration, dynamic comments, and quote and affirmation modules.
- **Third-Party Integrations:** Implemented Shopify metafield tracking, AWS S3 media storage solutions, and cross-domain user profile access.
- **Backend Development:** Designed and implemented Strapi data models and API endpoints, becoming a key backend contributor.
- **Optimisation & Maintenance:** Resolved critical bugs, improved code quality, and enhanced overall platform performance.
- **Knowledge Transfer:** Delivered comprehensive technical documentation and a seamless handover at the completion of the engagement.

Benjamin worked exceptionally well within our team, always taking direction with a positive attitude while completing tasks efficiently and reliably. His ability to adapt, collaborate, and solve problems was especially valuable. Please feel free to contact me if any further information would be helpful.

Yours sincerely,

Kim Larking
